

Pro Quartz Care & Maintenance

Taking Care of Your Quartz Surface

ProQuartz quartz surfaces are stylish and sophisticated surfaces with enduring and lasting beauty and strength. To retain this enduring beauty simply wipe the worktops with warm water and a mild non-abrasive cleanser and rinse with clean water.

Maintenance

ProQuartz quartz requires minimal maintenance. It is hard, non-porous and requires no sealing to retain its shine and brilliance.

Stains

For tough stains, moisten a clean cloth with a non abrasive cleaner and rub it into the stain, wipe and clean with a moist cloth to remove the cleanser residue.

Heat Tolerance

ProQuartz is structurally more resistant to heat than other surfaces. However, like any other stone tops, excessive heat and thermal-shock may cause damage. We recommend the use of a hot pad or a trivet when placing a hot cooking pan or other cooking units on the surface.

Scratch Resistant

ProQuartz is substantially harder than natural stone and highly resistant to scratching. However avoid abuse of the surface by refraining from using sharp objects such as sharp knives or screw drivers directly onto the surface.

Cleaning Products to Avoid

Cleaners that contain Pine Oil. Without very thorough rinsing, these products can leave behind a residue of pine oil. The pine oil then attracts and holds dirt on the surface, eventually reducing the cleanliness of the surface and its appearance. Highly aggressive cleaning agents such as oven/grill cleaners and dishwasher polishing agents that have high alkaline/pH levels (pH 8.5 or higher). Abrasive scrubs/cleaners containing either soft or hard abrasive particles. The abrasives will harm ProQuartz quartz surfaces and if the surface is not completely rinsed, a powder residue will remain reducing the appearance of the surface, especially on dark colours. Cleaners that contain Xylene, Toluene, Potassium Hydroxide or Caustic soda. Paint removers, Furniture strippers containing Trichlorethane or methylene chloride.
